

**ABSTRACT**

[0047] An assembly having a fan controller, thermal sensors, and a plurality of fans. A first device fan is located proximal to a first select electrical device. A second device fan is located proximal to a second select electrical device. A fan controller is coupled to a combination of thermal sensors located proximal to each of the first and second select electrical devices, respectively. The fan controller is coupled to the combination of thermal sensors via a thermal data channel. The fan controller adjusts the first and second device fans in accordance with information provided on the thermal data channel.
